Moulting Package

Strong, silky new feathers – five products in one programme

Why a moulting programme?

In just a few weeks your pigeons build a complete new plumage. That calls for extra protein, essential amino acids, vitamins, minerals, silicates and omega-3.

The most intensive part of the moult normally falls in September–October, when the large flight feathers grow. The right nutrition now gives better feathers for the whole coming season.

Save 16%

compared with buying the products separately

The package contains

2 × Omega-3™ – omega-3 and natural vitamin E for feather quality and healthy skin; makes the powders stick to the grain

MultiViTra™ – 28 vitamins, minerals and trace elements for the extra need during moult

ProGut Forte™ – probiotic for a stable gut flora and good use of the feed

Moulting and Breeding™ – essential amino acids incl. methionine and lysine for strong, silky feathers

Natural Dewormer™ – rich in silicates for strong, supple flight feathers

How to use – in short

- On the grain three days a week (e.g. Mon, Thu, Sat): moisten with Omega-3, then mix in Moulting and Breeding and Natural Dewormer. MultiViTra on Mon and Thu.
- In the 3–4 weeks of the heaviest moult: Omega-3, Moulting and Breeding and Natural Dewormer every day.
- ProGut Forte in the drinking water 2–7 days a week – daily during the heaviest moult.
- The full moulting programme with dosages and weekly schedule can be downloaded (scan the QR code below) from the product page.
